

Exercitiul 1

```
import java.util.Scanner;

public class Ex1 {

    public static void main(String[]Args) {

        Scanner timp=new Scanner (System.in);

        System.out.println("ora");

        int ora = timp.nextInt();

        System.out.println("minute");

        int minute=timp.nextInt();

        double rezultat=ora*60+minute;

        System.out.println(raspuns+"minute");

        timp.close();

    }

}
```

Exercitiul 3

```
import java.util.Scanner;

public class Ex2i {

    public static void main(String[]Args) {

        Scanner exercitiu=new Scanner (System.in);

        System.out.println("Marimea 1");

        float a=problema.nextFloat();

        System.out.println("Marimea 2");

        float b=problema.nextFloat();

        float c=(float) Math.sqrt(a*a+b*b);

        System.out.println("Ipotenuza="+c);

        problema.close();

    }

}
```

Exercitiul 3

```
import java.util.Scanner;

public class Ex3 {

    public static void main(String[]Args) {

        Scanner efg=new Scanner (System.in);

        System.out.println("Cantitate fructe");

        float e=efg.nextFloat();

        System.out.println("Cantitatea pierdere%");

        float f=efg.nextFloat();

        System.out.println("Cantitatea produselor in kg");

        float g=efg.nextFloat();

        float h=(100*e*g)/f;

        System.out.println("cantitatea necesara"+h);

        efg.close();

    }

}
```
